WRITTING ASSIGNMENT – LESSON 3

The given line graph below shows the number of cars manufactured in four different countries from 2020 to 2035.

In the four car-producing countries, there is a sharp change in production volume. Despite coming in at the bottom in 2020, China's steady, gradual change has helped it rise to the top in 2035. On the other hand, Japan was originally a giant car-producing nation. However, there is only a gradual increase from 2020 to 2025, after 2025, the number of cars in this country will decrease sharply by 2035, then Japan's car manufacturing market will be in second place after China. China's development affects many countries, the leading countries in automobile production have gradually decreased over the years, especially the USA, from the 2nd position in the 4 automobile producing countries in 2020 to 2035. to the last place in 4 countries. Among the four auto-producing countries, UAS still maintains its position when there is a sharp decline of the USA. Although the position is still maintained, the number of UAS is still slightly reduced compared to 2020. Over the past 15 years, 3 out of 4 countries have decreased in number. China, with a steady increase in the four countries, rises to the top position in 2035.
